Jacalin beta-11 chain - Arrocarpus champeden (fragment)
C.Species: Arrocarpus champeden
C.Species: Arrocarpus champeden
C.Dote: 19-War 1997 #Sequence.
C.Accession: $29637
B.Ngoc, L.D., Brillard, M., Hoebeke, U.
B.Ochin: Blobbys, Acta 1156, 219-222, 1993
B.Ochin: Blobbys, Acta 1156, 219-222, 1993
A.Title: The alpha- and beta-subunits of the jacalins are cleavage products from a 17-k
A.Recerence number: $29635, MUID:93152601; PMID:8427879
                                                                                                                                                                                                                                                                                                                                                                                                                                         Diction A - Citrobacter freundi: [fragrent]

A;Title: Junctional sequences of fetal T cell receptor beta chains have few N regions. A;Reference number: PT0509; MUID:91277601; PMID:1711558
A;Accession: PT0567
A;Status: translation not shown
A;Molecule type: mRNA
A;Resolues: 1-7 cFEE.
A;Experimental source: day 4 postnatal thymus, strain HALB/C
C;Keywords: T-cell receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Type protein - Erwinia chrysanthem;

Cyspecies: S3744

Rycoullie, A.; Toussaint, A.; Faelen, M.

Submitted to the EMBL Data Library, August 1993

Aybectription: Identification of the integration host factor genes of E. chrysanthemi.

                                                                                                                                                                                                                                                                                                                        0
                                                                                                    influenzae
                                                                                                                                                                                                                   immune responses while inducing a moderate humoral response against the carrier. The present sequence represents a specifically claimed immunoglobulin E (1gB) epitope immunogenic peptide sequence, which can be used in an immunogen of the present invention.
                                                                                       The present invention describes an immunogen (1) comprising a peptide (1a) and a carrier (1b) derived from protein D of Hemophilius influence or its fragment, Also described are: (1) a vaccine comprising (1), and an excipient; (2) preparation of (1), comprising collugating a peptide to protein D or its fragment; and (3) preparation of a vaccine of (1), comprising formulating (1) with an excipient. (1) has cylostatic, indiangledic, neotropic, neuroprotective and protozocacide activities. (1) and the vaccine are useful for the manufacture of a redicement for preventing and treating infectious diseases such as malaria or chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               igE Clepsilon 2 domain surface exposed epitope perional 350 10 No.2.
                     Immunogens and vaccine comprising the immunogen use(u) for preventing and treating infectious diseases e.g. malaria and chronic disease e.g. cancer, comprises peptide and carrier from protein 2 of influenzae.
                                                                                                                                                                                                                                                                                                                      Gaps

The present invention describes a peptide (1) comprising an isolated surface exposed group/epicpe (E.) of C-epsilon-2 domain (D) of immunoglobulin E (19E), or its mimotope. Also described are: (1) an immunoglobulin E (19E), or its mimotope. Also described are: (1) an immunoglobulin E (19E), or its mimotope. Also described are: (1) an immunoglobulin E (19E), a pharmacountain (I); (2) a vaccine (III) for treating allergy comprising (II); (3) a ligand (IV) capable of comparising (IV); (6) an immunogen (III) a peptide (1a) capable of being recognised by (IV); (6) an immunogen (III) comprising (IB); and (7) producing (III) by producing (II). (1) can have antiallergic and immunosuppressive activities, and can be used useful in medicine and in the manufacture of medicaments for treating useful in medicine and also in manufacture of medicaments for treating and preventing alergies. (IV) is useful in diagnostics and in the affinity purification of circulating arti-196 antibodies from blood. (I), (III) and PC are useful for treating applied a patient susceptible to or suffering from allergies. (IV) is also useful in diagnosting atopy. AAB2699 repersent peptide sequences which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                      conjugation of compounds (e.g. peptides) to carrier whicies

(e.g. macromolecules, polymers, dendrimers, proteins) to produce
biological and immunological constructs. The invention provides a
method for linking an epitope (e.g. a peptide) to a carrier (e.g. a
protein) for use in a pharmaceutical composition or a vacaine. The
invention describes peptides derived from or mimortopes of the
Cepsilon2, Cepsilon3 or Cepsilon4 regions of human immunoglobulin E
(igh) which are used to produce conjugated compounds. The compounds or
compositions of the invention are useful in the manufacture of a
medicament for the treatment of 1gF mediated diseases. The invention
allows for controlled conjugation of a peptide epitope (antigen) to a
protein so as to form an immunogenic conjugate which may be able to
raise a protective antibody response in an animal or human patient.

AAN16632-AA0166913 represent peptides derived from or mimotopes of
the Cepsilon2/Cepsilon3/Cepsilon4 region of human 1gE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin E (IGE) suitable to be cyclised and used in the invention.
manufacturing a medicament for the prophylaxis or treatment of allergy In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Thu Nov

Peptide P2sh derived as mimotope of Cepsilon2 region of human IgE

(first entry)

C7-NOV-2001

AA316656;

AAU16656 standard; Peptide; 6 AA

RESULT 7

AAU16656

Human, linkage technology, conjugated compound, carrier vehicle, epitope, Cepsilon2, Cepsilon3, Cepsilon4, immunoglobulin E, 195 mediated disease, antibody response.

```
Peptides useful for treating, preventing and amelioratine allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin E

The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce

(b.g. macromolecules, polymers, dendrimers, proteins) to produce

(b.g. method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharraceutical composition or a vaccine. The protein for use in a pharraceutical composition or a vaccine. The cinvention describes peptides derived from or mimotopes of the compositions of the invention are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient.

ANJ16612-AAU16913 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon4 region of human IgE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 31; DB 22; 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of all allergies. The present sequence is a peptide immunogen devived from imman immunoglobulin B (IgE) suitable to be cyclised and used in the invention.

The compositions are useful in humans and in veterinary medicine in domestic animals such as cattle, sheep, horses and companion animals e.g. cats and dogs as well as zoo animals. The relationship between the phosphopeptide structure and interaction with amorphous calcium phosphopeptide structure and interaction with amorphous calcium and analogues (AAM6662-22). These studies showed that the cluster sequence Ser(P) Ser(P)-Ser(P)-Glu-Glu-was mainly responsible for the interaction with ACP and that all three contiguous Ser(P) residues are
                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a stable calcium phosphate complex including phosphopetide stabilised amorphous calcium phosphate (ACP) or its derivative, where the phosphopetide includes the amino acid sequence: Ser(P)-Ser(P) Glu-Glu-Glu-Ghe amorphous phases stabilised by the phosphopetides are a delivery vehicle for co-localisation of Ca, producing supplate at the tooth surface in a slow-release amorphous form producing supplementor anticaries efficacy over prior art. The amorphous phases stabilised by the phosphopetides are also useful as distary supplements to increase calcium bioavailability and to help prevent diseases associated with calcium deficiencies. They are particularly useful for treatment or prevention of dental caries, calcium malabsorption and bone diseases such as osteoporosis and osteomalacia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

This invention describes a novel transgenic plant with increased resistance to infection by phytopathogens, especially Phythophthora infestans, contains, in its genome, a gene construct comprising a checklogius promoter, and a sequence (1) encoding a hydroxycinnamic acid coerayme Aityramine N (hydroxycinnamic acid) transferase (11), and control of the promoter. The products of the invention have fungicide activity. (II) is involved in biosynthesis of tyraminaride which is incorporated into plant cell walls to previde a chemical barrier against pathogens, extracellular tyraminaride inclusis the growth of pathogens. The introduction of [11], into tobacco, cotton, rape, melon, sugar beet, maize, and especially positio or tomato, is used to improve resistance to phytopathogens, particularly P. Infestans or exkarportic cells and its fragments can be used to express [11] in proxaryotic or exkarportic cells and its fragments can be used to except institution or control or exkarportic cells and its fragments can be used to express [12] in proxaryotic cells and its fragments can be used to extend to expense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hydrophilic, signal oligopeptide, hydrophilicity faximal vaccine, SIV, competitive inhibitor; feedback regulator; synthesis, gastin precursor; chaige, polarity, farnesyl synthesis, plasminogen adilvator inhibitor; hydroxymethylgitutaryl coenzyme. peptides. These signal of ignoration represent my printing signal peptides. These signal of ignorations are localised on the surface of the protein and are represented by the hydrophilicity maxima of the protein. These peptides are enriched in charged amino acids the specific signal character of these oligopeptides is determined by a characteristic combination of conformation and charge within the signal sequence. These oligopeptides may be used as vaccines in the treatment of human disease, as competitive inhibitors to prevent or reduce the metabolic action or interaction of a selected protein by blocking its specific signal sequences, or as therapeutic agents to function as feedback regulators to reduce synthesis rate of a selected protein. These peptides may be modified by omitting one or more amino acids at the validout consideration of charge and polarity, by substituting one or more amino acids with amino acid residues with similar charge and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polarity, by omitting one or more amino acids or a combination of these

                                                                                                                                                 The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid sequence selected from 51 defined amino acid sequences (ABL5347 to ABP5397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of particularly when compared to the use of whole antigens in vaccines, particularly when compared to the use of whole antigens in vaccine antigens is directed largely toward variable resions of the artigen, allowing for immune escaped due to mutations. The groups for inclusion in an group-based vaccine may be selected from conserved regions of viral or turnour associated antigens, which therefore reduces the likelihood of
                                                                                                                                                                                                                                                                                                                                          escape mutants. Furthermore, immunosuppressive groups that ray be present in whole antigons can be avoided with the use of group based vaccines. An additional advantage of an group-based vaccine approach is the ability to combine selected groups (CTL and HTL), and further, to modify the composition of the groups, achieving, for example, enhanced
                                                                                                                                                                                                                                                                                                                                                                                                  composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be reducated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. ABP1150: to ABP2412 represent peptide sequences used in the exemplification of the present
                                                                        Vaccine compositions comprising human immunodeficiency virus 1 (HIV-1) peptide groups, useful for vaccinating against HIV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HIV; HIV-1; human immunodeficiency virus; env; pol; 439; nef; vpr; vpu; vif; tat; cytotoxic T lymphocyte; CTL; immune response; epitope; antigen; vaccine; HIV infection; immunisation; virucide.

                                                                                                                                                                                                                                                         The present invention describes a composition (I) comprising a prepared human immunodeficiency virts-1 (HIV-1) group comprising an amino acid acquence selected from 5.1 defined amino acid sequences (ABL2534) to ABP25197). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of group-based vaccines has several advantages over traditional vaccines, particularly when compared to the use of whole antigens in vaccine antigens is directed largely toward variable regions of the antigen, allowing for immune escaped due to mutations. The groups for inclusion in an group-based vaccine may be selected from conserved regions of viral or tumour-associated antigens, which therefore reduces the likelihood of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              escape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccines. At a dditional advantage of an group-based vaccine approach is the ability to combine selected groups (CTL and HTE), and further, to modify the composition of the groups, achieving, for example, enhanced inmunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. ABPIISO1 to ABP25412 represent peptide sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hexapeptide ligand; drug design; high throughput screening; HTS; MQSAR;
Multivariate Quantitative Structure Activity relationships.
Vaccine compositions comprising human immunodeficiency virus-1 (HIV-1) peptide groups, useful for vaccinating against HIV-1 -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A novel method for identifying the interaction site, binding site active site in a macromolecule, using of informative combinatorial

The sequence represents a hexapeptide iigand selected according to 2 (18-13) fractional factorial design +3 cp (or 1 up 2 random), which were used to model the increaction of a liquid with its target. The invention relates to characterising the interaction between a liquid Y and a Target X by obtaining information [e.g Multivariate Quantitative C tracture Activity relationships, MCSAR) representing one or more physical and/or chemical properties of targets of type X and type Y to produce a model of interaction. The methods of the invention are useful for identifying outliers of type X or cutliers of type Y to produce a model of interaction. The methods of the invention are useful for identifying outliers of type X or cutliers of type Y drug design, design or identification of lead compounds (e.g by high throughput screening, HTS), design of ligands of type Y, with improved affinity and/or selectivity for targets of type X, protein improved affinity and/or selectivity for targets of type X, protein of type X or artificial ligands of type Y, analysis and/or in the engineering of regions and/or parts of type X, analysis and/or in the compound of organic compound, eachlyst, pharmaceutical, drug, protein, enzyme, antibody, molecule, macromolecule, peptidomemetic, carboydrater. The methods are also useful for designing new ligands for by the marganese and or the engineering of the analysis of the carbon antibody, molecule, macromolecule, that are also useful for designing new ligands for by the marganese and or the methods are also useful for designing new ligands for an antibody.

Carcinomas which may be treated or diagnosed according to methods of the invention include those of the skin, basal cells, large intestine, lung, colon, breast, bladder, oral, head and neck, larynx, asceptants, carcine glands, kidney, liver, pancreas, or prostate. Targetting carcinoma cells with Hsp4-binding agents results in efficient delivery of therapeutic agents, reduced doses, reduced side effects and sensitive detection or Imaging of carcinoma cells. Sequences AAB21204-B2340 represent phage display library heptapeptides identified as being able to bind Hsp47 in an exception of the invention.
                                                         The invention relates to methods of treating and diagnosing carcinomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
 comprising targeting molety which binds to Hsp47 external domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .
